NuPro CRS

NuPro Technologies, Inc.
Cold Reclaim System™ (CRS™)

turn off diheat

www.nuprotechnologies.com

In 2006, NuPro Technologies, Inc., manufacturer of products for the flexographic, offset, and gravure printing industries, became the flexographic industry's only winner of the U.S. EPA's Green Chemistry Challenge. NuPro won this prestigious award for its development of the industry's only environmentally safe washout solvent, in tandem with a safer, more economical and environmentally-conscious method of reclaiming flexographic washout solvent. Additionally, Nutre Clean XP washout solvent and the Cold Reclamation System (CRS) prove to be very cost-effective.

Maintenance is reduced by keeping plate processors cleaner, while yielding exceptional processing times and quality, regardless of plate thickness. Nutre Clean XP is now available in Canada through Ernest Green & Son.

Due to the fact that the CRS uses no heating elements and is a non-volatile process, it cuts energy consumption by as much as 90%. In addition, the CRS uses no petroleum consumables and produces no exhaust, and requires no air permits to operate.
